Senior software engineer with 12+ years of experience across software development, workflow automation, application modernization, and technical systems, including 5+ years focused on enterprise web application development. Experienced with React, TypeScript, C#/.NET, SQL, REST APIs, frontend architecture, third-party integrations, testing, and modernization of legacy applications. Strong background translating complex business workflows into reliable, maintainable software while preserving production stability. Currently expanding into AI-assisted and AI-enabled application development, with a focus on practical LLM integration, structured outputs, validation, and human-in-the-loop workflows.

PROFESSIONAL EXPERIENCE

01 / ORGANIZATION EVOLUTION

GTM SPORTSWEAR → CHAMPION TEAMWEAR → HANESBRANDS → UNRIVALED TEAMWEAR

Continuous employment through multiple acquisitions and ownership transitions. Promoted through increasingly technical roles, from product systems and workflow automation into frontend-focused application development and senior application ownership.

Senior Application Developer

Nov 2024 — Present

Unrivaled Teamwear · Enterprise Web Applications

- Redesigned Sales Order Entry error reporting and support triage after identifying that 60%+ of quote failures were product-data related, reducing issue routing from weeks to hours; stabilized recurring quote and configuration defects, dramatically reducing support volume and leaving only a small number of weekly edge-case tickets.
- Owned frontend development of Sales Order Entry customization and saved-quote workflows using React and TypeScript, including pricing, form validation, persisted configurations, and quote rehydration; implemented C#/.NET controller validation to detect outdated or invalid product data.
- Modernized the frontend of a tightly coupled legacy .NET MVC cart and checkout workflow using Vite and TypeScript, improving load times from roughly 8 minutes to under 30 seconds and adding validation and safeguards against duplicate submissions.
- Refactored duplicated product-customization logic and prop-drilled state into centralized React state management, reducing changes that previously touched 10+ pages/components and eliminating unnecessary backend requests during Sales quoting workflows.
- Led implementation of an Adyen payment migration across five legacy .NET and .NET MVC applications, researching API request/response requirements and user-facing validation to support stronger payment security and retire the previous payment process.
- Built and launched a Shopify storefront using Liquid for an influencer drop-shipping partnership, enabling Sales-managed content and timed product availability; the limited-release campaign sold out ahead of schedule.

Developer Applications III

Jun 2022 — Nov 2024

Hanesbrands Inc. · Application Development

- Owned UI/UX design and frontend development of the Sales Order Entry application, translating business requirements and approved wireframes into production React features while modernizing legacy workflows.
- Built an automated customer-proof workflow that eliminated a manual Sales-to-Art handoff where 50%+ of requests required clarification and could add 3–5 business days before production, contributing to broader improvements in order turnaround time.
- Modernized legacy application dependencies by removing deprecated Bower packages, identifying secure replacements, and resolving cascading compatibility conflicts without disrupting existing functionality.
- Introduced Playwright end-to-end testing for critical application workflows and connected React applications to existing REST APIs, SQL-backed data, and C#/.NET MVC services.

Research & Development Coordinator

May 2016 — Jun 2022

Champion Teamwear · Product + Process Innovation

- Planned and executed the migration of company image assets and web-to-print workflows from Adobe Scene7 to the Pulse Graphics Engine before Scene7's web-to-print functionality reached end of life.
- Developed JavaScript automation for Adobe Illustrator that reduced art-production processing time by approximately 75%, accelerated delivery of production-ready artwork, and improved file consistency.
- Automated product-scaling, artwork-conversion, and content-management workflows, including creation of thousands of templates, helping Technical Application Designers prepare customizable products more efficiently.

Lead Technical Application Designer

Mar 2014 — May 2016

GTM Sportswear / Champion Teamwear · Product + Production Systems

- Researched and developed the product-preparation workflow for publishing customizable sublimated products online, establishing repeatable processes for digital assets, templates, and web-to-print production.
- Created technical documentation and trained team members on web-based product preparation while partnering with development, marketing, and production teams on supporting systems and workflows.
